Education

United College of Engineering and Research **Sep. 2025 – Present**
Bachelor of Technology in Computer Science & Engineering | CGPA: 7.64/10 *Prayagraj, UP*

- AKTU, Lucknow | SGPA: 7.95 (Semester 1), 7.32 (Semester 2) | No backlogs

Projects

MindSync | *Java, Spring Boot, MySQL, AI APIs* **August 2026**

- Built **MindSync**, a student-focused mental health support platform where users submit mood check-ins and self-assessments, analyzed by AI to give personalized guidance.
- Developed a **Spring Boot** backend with a **MySQL** database for user management and data processing.
- Integrated AI APIs to analyze user responses and provide early-intervention resources to students.
- Built the user interface with **HTML, CSS and JavaScript** and deployed the live platform on **Vercel**.

ExpiryMitra | *Barcode Scanning, OCR, AI* **October 2026**

- Built **ExpiryMitra**, an AI-powered expiry tracker for small food businesses, hostel messes and cafés, in a **team of 4** within a 24-hour hackathon.
- Scans a product barcode to identify it and reads the printed expiry date using **OCR**, then validates and stores the date.
- Tracks stored products and alerts users before they expire to help reduce food waste.
- Deployed the working app live on **Render** and collaborated with teammates to split and ship features under time pressure.

DSA Memory (LeetCode Tracker) | *Browser Extension, Backend, AI* **In Progress**

- Building a browser extension that detects LeetCode submissions and uses spaced recall questions to help users retain solved problems.
- Designing a backend that stores each user's memory state and uses AI to evaluate recall answers.
- Privacy-first design: collects only submission data and never uploads the user's code.
- Building it step by step to learn **system design**, targeting smooth performance for about 10,000 users.

Hackathons & Competitions

- **U Hack 4.0 & Innohacks 4.0 (2025/2026):** Built rapid prototypes under strict deadlines while collaborating with a team.
- **Smart India Hackathon (SIH), Internal Round (2025/2026):** Pitched a project proposal in the college-level round, presenting the problem statement, system architecture and technical feasibility.

Technical Skills

Languages: Java, C, JavaScript, SQL
Frontend: HTML/CSS, JavaScript, React (learning)
Backend & Database: Spring Boot, MySQL
Tools: Git, GitHub
Currently Learning: React, Data Structures & Algorithms, System Design
